SINGLE SURGE PERFORMANCE

Pulse load rating in accordance with IEC 60115-1, 4.27
1.2μs/50μs ; 5 pulses at 12s interval for ±0.5% resistance change

Notes:

1. SINGLE SURGE PERFORMANCE graph is good for NON REPETITIVE applications operating in an ambient temperature of 70°C or less. For temperatures above 70°C, the graph power must be derated further linearly down to zero at 125°C.
2. To determine applicable surge power in continuous-surge applications:
 - Identify allowable duration and peak power P_{surge} of single surge;
 - Determine ratio of surge duration/surge OFF time in application;
 - Calculate P_{applicable} backwardly according to Y-axis of SURGE POWER DERATING CURVE.
